

CONSTRUCTION UPDATE

April
2025

Rubicon Wells Backup Power Project Begins in May

Project will provide backup power to keep water supply flowing during power outages.

WHAT: Contractors for TCPUD are planning in May to begin work on building the **Rubicon Wells 2 & 3 Backup Power Project**.

This project will construct a building to house a permanent backup generator. The project will also install new electrical and chlorine feed lines.

WHY: Winter access to this location is difficult and can slow down emergency response during power outages.

Permanent backup electrical power will keep water flowing during power outages and is critical for building a resilient water supply.

WHEN: Site preparations will begin in late April. Construction is scheduled to begin in May. Exterior construction will be completed this fall, with interior work likely continuing through December.

WHAT TO EXPECT: There will be associated heavy equipment and construction noise in the area and possible temporary traffic controls.

Two Other Rubicon Water Projects Also Planned

In addition to the Rubicon Wells Backup Power project (described on reverse side), contractors for TCPUD will be working on two other projects to improve the water system in your area.

Lower Meeks Bay Pressure Reducing Valve

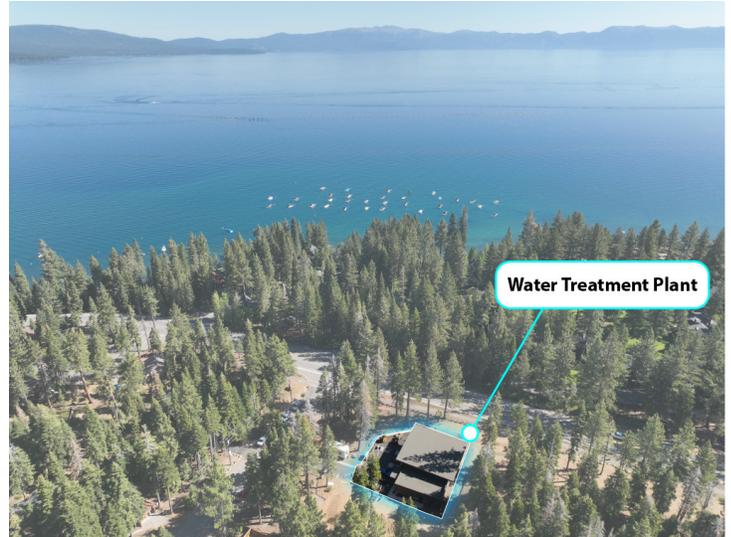

This project will install 600 feet of new water mains, improve water pressure during fire flows, and add a new water system connection to keep water flowing in the event of a failure or required maintenance.

Rubicon Tank Water Feed Line Replacement

This project replaces and upsizes 275 feet of water main from the Rubicon Tank to the rest of the water system. This new, larger pipe will provide more flow and water pressure to ensure adequate water supply during high demand conditions like fire flows.

Funding for all three Rubicon projects is provided, in part, by the **El Dorado Water Agency**.

Progress on West Lake Tahoe Water Treatment Plant Continues

Work continues to bring the new West Lake Tahoe Regional Water Treatment Plant online, with full operation expected in Summer 2025.

The new water treatment plant replaces a temporary facility in Chambers Landing. The new plant will provide a permanent, drought-resistant drinking water source from Lake Tahoe and support improved fire suppression capacity.
